

## Big success for Meter&Control at EUW 2018

The unique opportunity to meet and showcase at the global industry event

Our most successful appearance at the European Utility Week so far occurred from 6th to 8th of November, this time in Vienna. Meter&Control occupied a much more

prominent place at the show and on the industry map. With the most recent product portfolio and greatly improved exhibition appearance, the Company was showcasing

its comprehensive range of hardware and software solutions for smart energy metering and management: smart electricity meters with integrated PLC and GPRS/3G/LTE communication, modular meters, data concentrators and gateways, as well as HES software for remote meter reading and power consumption management of commercial and residential electricity customers, including IDIS and DLMS interoperable devices.

ESMIG, The European Smart Metering Industry Group, which we joined as members earlier this year, provided extraordinary support in organising this year's show.

European Utility Week in Vienna brought together 12,000 of Europe's thought leaders and visionaries in the energy industry, as well as 480 utilities from all over the world. Beside offering a detailed insight in the global scene of smart technologies in energy sector, it was a great occasion to meet our international customers and discuss the personalized services we offer with prospective new clients. EUW was useful to benchmark our technologies and products offering against the global trends and to confirm once again the resilience and innovation of small and medium enterprises in the dynamically developing sector of smart metering. In case you missed us in Vienna this year, we are looking forward to the next year's edition in Paris in November. ●

## African smart energy development summit

Meter&Control advocates IDIS interoperability as a solution for successful rollout

The Africa Smart Grid Summit, which took place in Tunisia on 21-22 November, gathered over 300 world's energy leaders and provided a platform for debate and action regarding the energy infrastructure in African countries, with an opportunity to network and move energy projects forward. Meter&Control sponsored this event in a leading line-up of participants and manufacturers. Mr. Jovan Vujasinovic, co-founder, President&CEO at Meter&Control, took part in the summit in the role of IDIS association

Ambassador. His presentation "IDIS Interoperability - the base for successful rollout" was a practical case study which showed how a common standard can facilitate the decision-making process to utilities, rollout and management of smart grids, with benefits such as reduced losses, investment and operational costs. With about \$600 Billion market value of large projects to be implemented in Africa, energy upscale and access to electricity remain the main priority and focus across the continent. ●

### A reminder on our core values

While building our company by strictest standards, we have also remained flexible regardless of the project size and complexity, because we know it is impossible to plan every detail in advance. Without compromising on quality and reliability, our flexibility guarantees successful and complete realization of agreed projects.
